(54) INTEGRATED MULTIFUNCTION DOCUMENT PROCESSING SYSTEM

(57)Abstract:

PURPOSE: To obtain an integrated multifunction document processing system in which scanning FAX, printing, or copying of a document can be executed.

CONSTITUTION: This system includes a multifunctional local device 14 having a scanner for optically scanning document information, and the scanned document information is converted into an electric document signal, and transmitted to a processor 12. The multifunctional local device includes a recording device such as a printer for receiving a document signal from the processor 12, and preparing a recording configuration based on the signal. A control module 22 interposed between the processor and the multifunctional local device receives the document signal from the multifunctional local device and a remote device 16, and transmits it to the processor 12. The control module also receives the document signal from the processor, and transmits it to the multifunctional local device or the remote device 16. The control module generates and
